

SPRAY | SCAN | DONE

To achieve optimal accuracy and results with **3D scanning** it is often necessary to apply an anti-reflection coating

Blue Scanning Spray

- Vanishing Scanning Spray
- Time and cost savings – no post-cleaning necessary; the spray sublimates and evaporates after the scanning process
- Thin, homogenous and dry to the touch coating
- Reference points stick on the coating
- Free of Pigments – spray dust does not damage the scanning equipment

Orange Scanning Spray

- Disappearing state of the art scanning spray
- Has longer sublimation time compared to the Aesub Blue
- Long lasting - Sublimation time of 12-24 Hours
- No cleaning required
- Thin and homogenous coating
- Free of pigments

To achieve optimal accuracy and results with **3D scanning** it is often necessary to apply an anti-reflection coating

STATE OF THE ART SCANNING SPRAY

AESUB White Scanning Spray

- Permanent Scanning Spray
- Without Titanium dioxide nano particles (TiO₂)
- Thin and homogenous coating
- Contains pigments

AESUB Green Scanning Spray

- Disappearing state of the art scanning spray
- Bulk for spray gun and air brush
- Perfect for large scale and automated scanning applications
- Able to spray a car within minutes
- No cleaning required
- Thin and homogenous coating
- Free of pigments
