

CENTRAL SCANNING

3D Scanning and 3D Printing

THE BENEFITS OF 3D PRINTING

- **SAVES TIME** – From a CAD Model, complex designs of parts and products can be manufactured a lot quicker than traditional methods.
- **REDUCES COSTS** – 3D printing offers more affordable options to create parts and tools through additive manufacturing at much cheaper rates than traditional machining.
- **FLEXIBILITY** – Bringing your designs to reality which can easily be customised or modified during the manufacturing process enabling you to make adjustments along the way.
- **NO DESIGN RESTRICTIONS** – print complex geometries with no boundaries on design.
- **ENVIRONMENT** – Less energy is used to 3D print a tool, than creating one using slower, more traditional methods.
- **SPEED OF PRODUCTION** – staying ahead of the competition by creating prototypes. An idea/concept can be produced to a physical part in a relatively short amount of time.

CENTRAL SCANNING PROVIDE

- **CHOICE** – A wide range of materials available/ suitable to meet your product requirements.
- **AVAILABILITY** – Production and schedule times to meet your needs.
- **CAPACITY** – We currently have 9 3D printers, printing up to a maximum size of 500mm x 500mm x 750mm (tall).
- **ADVICE** – We are committed to helping you find the best solutions.

The quality of our equipment, together with highly skilled engineers, means Central Scanning can provide a premier level of expertise, supported by cutting-edge technology.

As well as undertaking the printing, we'll also help guide you through from your designs and initial concepts, all the way through to the finished product.

Talk to our team today to discuss our technical capabilities and how we can help you.
